

## **POWER-BI DEVELOPER - PROJECT**

**Create a PowerBI report from the dataset given.**

Requirements in the report.

1. Date table.
2. Date slicer (Slider) on page. .
3. Count the number of cars of a particular brand/company/department. These should be Individual cards grouped together.
4. Calculated column on car table that shows the latest car bought date based on Buyer details.
5. Calculate the average salary from a particular country.
6. Calculate the make year with the highest average price.
7. The most popular car brand for each gender

Please also prepare a presentation (it doesn't need to be a ppt) on the dashboard you have created, explaining how the calculations have been done,

what data is being shown and why a particular visual is being picked. You can also add any additional visuals apart from the questions above to help with the presentation.

(Use measures for calculations above)
